

## Characteristics

- A long season maturing semi flint white maize hybrid
- Late maturity (138 – 145days)
- Very good performance in ecological regions i, iia, iib and irrigation
- Excellent tolerance to MSV, GLS, Rust and Cob Rot
- Stay green effect making it good for silage
- High grain stover yield, making it good for silage
- Very good tip cover
- Good standability on stalk and root
- Yield potential of +16mt/Ha under GAP

### Recommended Zimbabwe Ecological Regions

- |  |   |
|--|---|
|  | (I) - Specialised and Diversified Farming (>1000mm) |
|  | (IIa) - Intensive Farming (750-1000mm)              |
|  | (IIb) - Intensive Farming (750-1000mm)              |
